MEMORANDUM FOR: Deputy Director of Information Technology

STAT

FROM:

[Redacted]

Deputy Director of Information Resources

SUBJECT: Peer-to-Peer Connectivity Requirement

*Larry,*

The DI has a mandatory baseline functional requirement to establish peer-to-peer connectivity pathways. The current PBX network strategy requires that any communication between devices take place through one of the mainframe computer centers. The DI requires an alternate strategy, supplemental to the current networking architecture. This supplemental network strategy should provide point-to-point file transfer, local control of peripherals, and departmental computing independent of the mainframe computing centers.
